Hands-free

or classical?

**The Utopia video doorphone**  
spoilt for choice.

**urmet**

## Much more than mere beauty.

Urmet's Utopia video doorphone.

Dedicated to those who seek perfection in even the most minor details of their home, to those inspired by the purity of **design**.

Dedicated to interior décor experts who seek to astonish with the right touch of refined elegance.

Designed specifically for you, a video doorphone that combines a passion for **innovative technology** with startling, high class styling, that proposes delicate, clear-cut lines and refined combinations of color and materials.

From the drawing-board of architect **De Lucchi**, designed and produced drawing on Urmet's experience.

With Utopia, you can unleash your desire for forefront design and, at the same time, treat yourself to state-of-the-art color video doorphone technology.

## Utopia **classical**

**Video doorphone with 4" TFT display that guarantees bright, perfect viewing from any angle. Profile reduced to a mere 55mm.**

**A loudspeaker dedicated to the call guarantees a loud, pleasant sound that can be adjusted using a specific selector (high/low/mute) located under the lower flap. The mute function excludes the call and is highlighted by a green led located to the side of the display. The door**

## Utopia **hands-free**

**The general characteristics of the Hands-free versions are identical to those of the classical model.**

**The absence of the hand-set reduces the profile of the video doorphone even further: just 53 mm that become 16 mm in the wall embedded version. Utopia Hands-free is equipped with back-lit audio and door release buttons: the first is**

**green while the second is amber. Backlighting remains active for all the time during which the display is on. Also, pressing the audio key, the green led beside the display lights up. Utopia Hands-free makes it possible to talk with an outdoor station in two different ways: hands-free or with the key pressed. In the first case, the audio key is**

release key is backlit and remains on while the display is active. A red led alerts you that the door may have been left open. All the functions of Utopia are adjustable: color and brightness using sliders; contrast using a trimmer under the lower flap. Utopia features 3 buttons for supplementary services such as opening of a secondary door or

switching on of the stair lights, etc.

With Urmet technology, you can connect several video doorphones in parallel and set up intercom systems with up to 4 appliances. Utopia with hand-set can be used in all analogue installations and digital systems such as Digivoice and 2GO!

Elegance and discretion: Utopia's volume contrast and color adjustment controls are hidden under the fold-down flap.

pressed once only and then pressed again at the end of the conversation; in the second case, the audio key must be held down throughout the conversation.

Under the sliding cover, Utopia features another 2 buttons for auxiliary services that can be used to open secondary entrances, to switch on the stair lights, etc.

In the wall embedding version, Utopia is fastened with a frame that makes it possible to hide any rough edges left by previous installations. The video doorphone can be used in combination with video doorphones with hand-set in analogue systems and in certain digital systems such as, for example, the Digivoice.

# UTOPIA VIDEO DOORPHONE

An object of passion that is also **easy to install**; just use the specific brackets and it is immediately available.

Urmet Utopia is not a unrealizable dream but a reality that oversteps imagination also because it is now available in a **Hands-free version**.

Another of Utopia's distinctive features is its **slim profile** that reduces its overall dimensions to a minimum and endows it with an extremely personal silhouette.

**No-one else offers you such a personal silhouette.**
